

A patch test is required 48hrs before treatment

Before treatment

1. Avoid sun exposure 4-6 weeks before & after treatment
2. Avoid depilatory creams 1 week prior to treatment
3. DO NOT bleach, pluck or wax the hair for 6 weeks prior to treatment
4. If you have a history of cold sores, Zovirax may be used prior to treatment & continued 1 week after treatment
5. Tanned skin cannot be treated. If treated, you may develop hypopigmentation (white marks) or hyperpigmentation (brown marks) which may be permanent. This also applies to self tanning products.
6. **Please remember to shave the area 12—24hrs before treatment. Not shaving the area may result in you not being able to have your treatment on that day**

Post treatment advise

1. Immediately after the treatment, there may be redness & swelling in the treatment area. This can feel like mild sunburn.
2. The application of iced water during the 1st few hours after treatment can reduce any discomfort
3. Make up can be applied once any heat in the area has faded
4. Apply SPF 30+ daily during your course & avoid sun exposure to reduce the risk of hyperpigmentation (dark spots)
5. Avoid picking or scratching the treated skin.
6. Hair regrowth occurs at different rates on different areas of the body. New growth will not occur for at least 3 weeks after treatment.
7. Anywhere from 5-19 days after treatment, shedding of the surface hair may occur & this appears as new hair growth. This is NOT new hair growth, you can use A loofa or gentle exfoliation to remove these hairs
8. DO NOT use any hair removal treatments which disturb the hair follicle (waxing electrolysis or tweezing) during your course. Shaving or depilatory creams may be used
